# SIEMENS

Actuators

SQN7...

Reversible electromotoric actuators for air dampers and valves of oil or gas burners of small to medium capacity.

The SQN7... and this Data Sheet are intended for use by OEMs which integrate the actuators in their products!

Use	and	features
-----	-----	----------

US	e and features			
		of s	small to medium capacity, for loa ume: In connection with P-PI or PID	d for driving gas or air dampers of oil or gas burners d-dependent control of the fuel and combustion air controllers, such as the RWF40 of burner controls, such as LFL, LME, LMG, control or 3-position controllers
•	All types of actuators feature:	- S - M - Ir - E	npact-proof and heat-resistant pl crew terminals for the electrical laintenance-free gear train, whic iternal position indication asy-to-adjust end and auxiliary s itegrated electronic circuits	connections
•	Holding torque:	-	QN70/SQN71/SQN75 QN74	0.71.3 Nm 0.7 Nm
•	Running time:	-	QN70/SQN71/SQN75 QN74	430 s 4 s
•	Direction of rotation:	-	QN70/SQN74 QN71/SQN75	counterclockwise clockwise
•	SQN74/SQN75		ixing holes and cable entries quivalent to actuators of the sam	ne category made by Conectron and Berger

CC1N7804en 29.03.2012

Building Technologies Division Infrastructure & Cities Sector

# To avoid injury to persons, damage to property or the environment, the following warning notes must be observed!

# Do not interfere with or modify the actuators!

- All activities (mounting, installation and service work, etc.) must be performed by qualified staff
- Before making any wiring changes in the connection area, completely isolate the plant from mains supply (all-polar disconnection). Ensure that the plant cannot be inadvertently switched on again and that it is indeed dead. If not observed, there is a risk of electric shock hazard
- Ensure protection against electric shock hazard by providing adequate protection for the connection terminals and by securing the housing cover
- Each time work has been carried out (mounting, installation, service work, etc.), check to ensure that wiring is in an orderly state
- Fall or shock can adversely affect the safety functions. Such actuators must not be put into operation, even if they do not exhibit any damage

#### **Mounting notes**

• Ensure that the relevant national safety regulations are complied with

# Standards and certificates

Conformity to EEC directives - Electromagnetic compatibility EMC (immunity)

- Low-voltage directive

ISO 9001: 2010 Cert. 00739 ISO 14001: 2010 Cert. 38233

Only valid for SQN70.xxxRxx SQN71.xxxRxx

# **Disposal notes**

The actuators contain electrical and electronic components and must not be disposed of together with household waste.

Local and currently valid legislation must be observed.

#### Mechanical design Housing Made of impact-proof and heat-resistant plastic -The housing accommodates: - The reversible synchronous motor with gear train, which can be disengaged - The camshaft of the control section - The relays, depending on the type of actuator - The switches, connected to the terminals via the printed circuit board Color: SQN70.../SQN71...: Gear train housing dark-grey, cover light-grey SQN74.../SQN75...: Gear train housing black, cover black Drive motor Reversible and locking-proof synchronous motor \_ Coupling Drive shaft can be manually disengaged from the gear train and motor (by pressing pin K) Automatic reengagement ressing pin "K" By means of adjustable cams Adjustment of switching points Scales beside the cams indicate the angle of the switching point Assignment of cams to the end and auxiliary switches is color-coded (see Connection diagrams) Some of the cam feature fine adjustment; they can be adjusted with a standard \_ screwdriver The other cams can be adjusted manually or with the enclosed hook-spanner or a similar tool Position indication Internally: Scale at the beginning of the camshaft on the gear train side \_ Electrical connections See Technical data Gear train Maintenance-free Drive shaft Made of black-finished steel Ready fitted to the front of the gear train Different versions available

Mounting and fixing	-	Front of the gear train is used as the mounting surface
	-	Actuator is secured via through-holes

#### Special versions for fitting potentiometer

Fitting a potentiometer	Certain types of actuators are supplied ready prepared for fitting a potentiometer. These actuators differ from the basic type <b>only in that the cover is higher</b> . They are prepared for housing the potentiometer. Accessories are not required. With these types of actuators, the third digit after the dot in the actuator's type reference is an «8».
	Example: SQN7x.xx8Axx $\rightarrow$ version for fitting a potentiometer, mounted higher cover AGA34
	With the other types of actuators which are suited for fitting a potentiometer, the higher cover <b>AGA34</b> must be ordered (see Ordering).
	The required type of potentiometer is to be ordered as a separate item (see Ordering).

The UL-registered types of actuators

• also meet CE requirements

· are of the same basic design as the equivalent standard types

The only difference between the standard versions and the UL-registered versions is the use of other materials, especially plastics. In addition, the UL-registered versions are supplied complete with an adapter for use in the U.S. and Canada (see Dimensions).

# Environmental conditions

Storage	DIN EN 60721-3-1	
Climatic conditions	Class 1K3	
Mechanical conditions	Class 1M2	
Temperature range	-20+60 °C	
Humidity	<95% r.h.	
Transport	DIN EN 60721-3-2	
Climatic conditions	Class 2K2	
Mechanical conditions	Class 2M2	
Temperature range	-50+60 °C	
Humidity	<95% r.h.	
Operation	DIN EN 60721-3-3	
Climatic conditions	Class 3K5	
Mechanical conditions	Class 3M2	
Temperature range	-20+60 °C	
Humidity	<95% r.h.	

# Caution!

Condensation, formation of ice and ingress of water are not permitted!

#### Function

Replacement of SQN30.../SQN31...

A synchronous motor drives the camshaft via a gear train. The camshaft actuates the end and auxiliary switches. Using the associated cam, the switching position of each end and auxiliary switch can be adjusted within the working range. Some of the actuator versions are equipped with electronic modules, which perform auxiliary functions in connection with the end and auxiliary switches, or with external devices, such as controllers (see Connection diagrams). The functions and technical data of both lines of actuators SQN70.../SQN71... and SQN74.../SQN75... are nearly identical.

The *Type summary* contains actuators type **SQN3...**, which can be replaced by SQN70.../SQN71... with the help of a mounting kit (see Ordering).

The SQN30... and SQN31... contained in the Type summary

- See SQN7... AC 230 V versions
- are versions with no facility for fitting a potentiometer (see Data Sheet N7808)

Mechanical adaptations are not normally required. To be noted are the different terminal assignments used with the 2 lines of actuators.
