

# **Metasol**

Meta Solution

Electronic motor protection relays

**EMPR** replacing thermal overload relay is electronic motor protection relay which is used to protect the low voltage motor and also called as Electronic Overcurrent Relay or an Electronic Overload Relay.

As a digital motor protection relay with MCU, EMPR is highly reliable by implementation of real-time data processing and high precision and also can secure motor safely with various functions such as phase loss, phase reverse, unbalanced, stall, lock, ground fault, short circuit protection depending on the model .

EMPR has compact and simple appearance so it can be combined with the magnetic contactor. Various installation methods and separation of terminal block make easy design and manufacturing feature for MCC(Motor Control Center).

Especially, EMPR is EMC tested and approved to operate safely without any malfunction caused by electromagnetic wave and surge. Most of the models have received CE Mark and UL certification based on its product reliability.

General Motor Protection Relay

### GMP Series

- Various connection & mount
- Inverse or definite time protection mode
- Ground fault type
- Display the causes of the fault by LED

Digital Motor Protection Relay

### DMP Series

- Ampere meter, Load rate and the causes of fault Display
- Standard, Ground fault and short circuit protection type
- Select the Inverse or definite time protection mode
- Unit or Extension in one body by cable option
- Option function type (DMP-a)

Intelligent Motor Protection Relay

### IMP Series

- Wide current setting range (0.125~100A)
- Communication support type (MODBUS, Analog)
- Zero current and residual current sensing
- Save the fault events and operating time setup
- Select the Inverse, thermal inverse or definite time modes
- Unit or Extension in one body by option cable

# Electronic Motor Protection Relays

# Electronic motor protection relays

## Features

### GMP Series

- Combination with Metasol contactors for compact motor starters

EMPR model	Contactor model
GMP22-2P/3P/3PR	MC-9b, MC-12b, MC-18b, MC-22b
GMP40-2P/3P/3PR	MC-32a, MC-40a

- Broad range of current setting
- Inverse time or definite time characteristics
- Simple operation and trip cause indication via LED
- Various Connection

### Certification of CE, UL, CCC and S mark

- Various protection functions

Types (GMP-□)	2P, 2T, 2S	3P, 3T, 3S	3PR, 3TR, 3SR	3TN, 3TZ	3TNR, 3TZR
Number of sensors	2CT	3CT			
Overcurrent	■	■	■	■	■
Phase failure	■	■	■	■	■
Lock/Stall	■	■	■	■	■
Phase unbalance		■	■	■	■
Reverse phase			■		■
Ground fault				■	■

- Large current can be applied through additional current transformers
- MCU (Microprocessor Control Unit) built-in
  - excellent reliability by achieving real-time data processing and high precision.
- Checking the last failure cause
  - can be checked by pushing Test/Reset button twice in 0.5 seconds,
- Products for ground fault protection
  - detecting of zero phase currents (ZCT used: GMP60-3TZ)
  - detecting of residual currents (ZCT unused: GMP60-3TN)

# Features

## DMP Series

### Digital measuring and displaying

- Display digital ampere-meter
- Save the causes of the fault and the value
- Display motor load rate by graph

### Convenient structure

- Install the Unit / Extension type in one body
- The display part may be separated from the body
- You can check the values and the causes of the fault without opening the distribution panel door
- removable terminal block

### Various protection functions

Protection	DMP□-S/Sa	DMP□-SZ/SZa	DMP□-SI	DMP□-T/Ta	DMP□-TZ/TZa	DMP□-TI
<b>Wiring</b>	Screw type			Tunnel type

<b>Phase failure</b>	■	■	■	■	■	■
<b>Reverse phase</b>	■	■	■	■	■	■
<b>Phase unbalance</b>	■	■	■	■	■	■
<b>Ground fault</b>		■			■	
<b>Short circuit</b>			■			■

### Trip curve selectable (Inverse/Definite)

### Applicable to inverter control circuit

LS EMPR has high performance under the harmonic noise and can be used in the Inverter control circuit (20~200Hz), (except Ground fault model)

### Optional functions (DMP-a type)

- Storing up the last fault cause
- Storing up motor operation hours
- Checking replacement cycle of motor bearing by alarming

# Electronic motor protection relays

## Features

### IMP Series

The EMPR IMP series are optimal solutions for protecting and monitoring motors in complex industrial fields needed high safety and productivity.

#### Wide Current Setting Range: 0.125~100A for One Model

With the slide S/W, the current setting range can be decided 0.5~10A or 5~100A. Depending on the number of CT penetration, even 0.125A current can be protected. (Wire penetration hole is required).

#### Communication support type

RS-485 MODBUS communication with various systems. The model with analogue signals (4~20mA) is compatible with transducer systems.

#### Thermal Inverse Time, Inverse Time and Definite Time Modes

According to user's needs, the motor can be protected in the inverse time mode or definite time mode.

#### Wide Setting of Ground Fault Current Sensitivity 30mA~25A

zero current sensing by zero sequence CT.  
zero current sensing by Residual circuit.

#### Date and Total Operating Time Setup

When a fault occurs, its date and time are stored for easy checkup. When the total operation time is over, it is displayed for changing motor bearings or supplying oil.

#### Quick Setup

All settings can be decided quickly on the display.

#### Comprehensive Digital Motor Protection Relay with the MCU (Microprocessor Control Unit)

Real-time processing and high precision

#### One-Body Type and Separate Body Type

The display can be attached to the panel front so that current, operation time and settings can be checked without fetching the unit. With the display separated, the motor protection is available.

#### Applicable to Inverter Circuits

Thanks to its characteristics to harmonic noise, it can be applied to the inverter control circuits. The available frequency range is 20~200Hz. When the relative harmonic factor is over 30%, a harmonic filter should be installed (However, the ground fault function should be off).

#### Various Reset Functions

Manual, automatic and electric reset functions are provided for customer convenience.

#### Password

Settings are protected with a password.

#### Storage of Fault Events

Up to 5 fault events can be stored for easy fault history management.

#### 3-Phase Digital Ampere-Meter

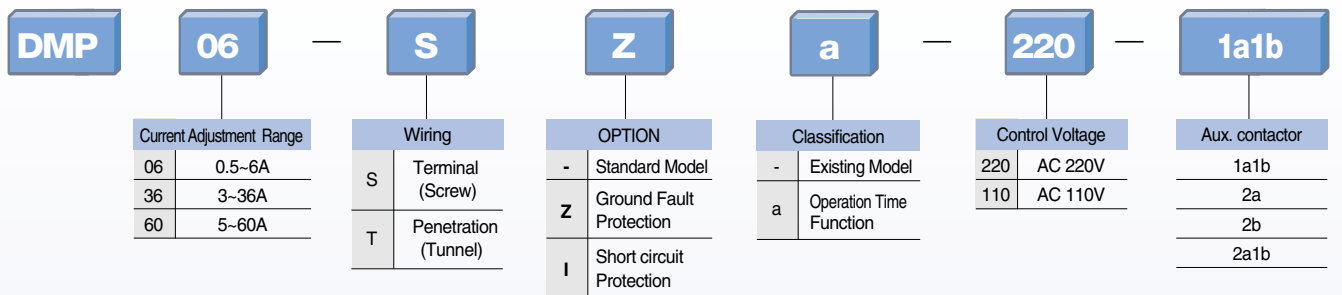

3-phase current is displayed every two seconds for motor monitoring.

## Inverse time characteristics

### GMP22/40 Type

#### Description

- Wide and adjustable current range
- Adjustable trip time (trip class 5-30)
- Designed suitable for use with contactors
  - Directly mountable on the Metasol contactors (Pin type)
  - Separate mount versions are also available
  - Separately mountable on 35mm DIN rail or with screws
- 1NO+1NC trip contacts
- Manual reset as standard (Automatic reset optional)

#### Front face configuration

#### Extended protective functions

Types (GMP22/40-□)	-2P, -2T, -2S	-3P, -3T, -3S	-3PR, -3TR, -3SR
Number of sensors	2CT	3CT	3CT
Functions	Overcurrent	✓	✓
	Phase failure	✓	✓
	Locked rotor	✓	✓
	Phase unbalance		✓
	Reverse phase		✓

#### Technical information

Relay control voltage	100 to 260V AC 50/60Hz
Auxiliary contact	3A/250VAC at resistive load 1NO (97-98) + 1NC (95-96)
Setting tolerance	Current ± 5% Time ± 5% (or ± 0.5sec)
Insulation resistance	Min 100MΩ at 500V DC
Impulse withstand voltage	5kV (IEC 61000-4-5)
Fast transient burst	2kV (IEC 61000-4-4)
Ambient temperature	-25 to 70°C for operation -30 to 80°C for storage
Humidity	30 to 90% RH

Certificate  
CE, ULcUL

4	0.12~1.5

# Ampere meter function

## GMP60-TD(a) Type

### Description

- Definite time characteristics
- Delay time setting in starting and operation
- Over current, phase failure protection
- Definite time characteristics
- Wide current setting range
- Screw or Din-rail mounting
- Display the causes of the fault and the values

### Extended protective functions

Types		GMP60-TD	GMP60-TDa
Number of sensors		2CT	2CT
Functions	Overcurrent	✓	✓
	Phase failure <small>Note1)</small>	✓	✓
	Locked rotor	✓	✓
	Under current	-	✓
	Auto reset	-	✓

\* Only two-phase protection is available.

### Ratings (Tunnel type)

Model		GMP60-TD	GMP60-TDa
Type		Tunnel type	
No. of CT		2	
Current setting range (A)		0.5~60	
Operating time characteristics		Definite time characteristics	
Time setting (sec)	Delay time	1~60	
	Operating time	0.5~30	
	Reset time	Manual reset	1~20min
Allowable error	Current	±5%	
	Time	±5% (or ±0.5 sec)	
Control power	Voltage	AC 110/220V (±10%)	
	Frequency	50 / 60Hz	
Aux. s/w	Contact <small>Note2)</small>	2SPST (1a1b)	
	Ratings	5A 250Vac, resistive load	
	Operation	95 𠄎 96close 97 𠄎 98open	
Insulation resistance		Min. 50M $\Omega$ at 500Vdc	
Surge insurance (IEC 61000-4-5)		5kV	
Fast transient burst (IEC 61000-4-4)		2kV	
Environment	Operation	-25~70°C	
	Storage	-50~80°C	
Relative humidity		46~85 RH (No freezing)	
Trip indicator		7-Segment	
Dimension (mm) W x H x D		72 x 63 x 69	
Mounting type		Separate mount (Screw & Din-rail)	

Note) 1. Under phase failure condition over current flows. The EMPR tripped if it is over the setting over current  
 2. When power applied the Aux. contact operate

### Tunnel type EMPR protects the current under 0.1A

If we increase the number of times of a wire pass through the CT (Tunnel), the EMPR can detect the lower current

No. of times to pass through	Current setting range	Current Ratio
1	0.5~6	1
2	0.25~3	0.5
4	0.12~1.5	0.25

## Definite time characteristics with 3CT

### GMP60-3T(R) Type

GMP60-3T  
GMP60-3TR

#### Description

- Cable connecting through CT holes (option: with screw)
- Auxiliary contact: 2SPST (1a1b at energization)
- Wide and adjustable current range (0.5~60A)
- D-time: 0.2~60 sec. / O-time: 0.2~15 sec.
- Control voltage: AC100~245V 50/60Hz
- Manual(electrical) reset as standard
- Applicable to inverter at the secondary circuit (except GMP60-3TR)

Terminal Lug

#### Extended protective functions

Types		GMP60-3T	GMP60-3TR
Number of sensors		3CT	3CT
Protective functions	Overcurrent	✓	✓
	Phase failure	✓	✓
	Locked rotor	✓	✓
	Phase unbalance	✓	✓
	Reverse phase	-	✓
Storing the last fault cause		✓	✓

#### Selection

Mount/Connection	Optional function	Setting range	Catalog No.
<ul style="list-style-type: none"> <li>• Separate mount</li> <li>• Cable Connection through CT holes</li> </ul>	None	0.5 - 60A	GMP60-3T
	Reverse phase	0.5 - 60A	GMP60-3TR

Large current over 60A can be applied through additional current transformers

#### Technical information

Mounting	On 35mm rail or panel with screws
Setting tolerance	Current $\pm 5\%$
	Time $\pm 5\%$ (or $\pm 0.5\text{sec}$ )
Frequency	50/60Hz
Auxiliary contact rating	5A/250VAC at resistive load
Insulation resistance	Min 100M $\Omega$ at 500V DC
Surge insurance	5kV (IEC 61000-4-5)
Fast transient burst	2kV (IEC 61000-4-4)
Ambient temperature	-25 to 70°C for operation
	-30 to 80°C for storage
Humidity	30 to 90% RH
Operating indication	Red/Green 2-color LED, Red LED
Standard	IEC60947-1

# For ground fault current protection

## GMP60-3TZ(R), 3TN(R) Type

GMP60-3TZ, 3TZR  
GMP60-3TN, 3TNR

Terminal Lug

### Description

- Cable connecting through CT holes
- Auxiliary contact: 2SPST (1a1b at energization)
- Wide and adjustable current range (0.5~60A)
- Definite time characteristics  
D-time: 0.2~60sec. / O-time: 3sec.
- With 3 sensors (CT)
- Control voltage: AC100~245V (50/60Hz)

### Extended protective functions

Types		GMP60-3TZ, 3TN	GMP60-3TZR, 3TNR
Number of sensors		3CT	3CT
Protective functions	Overcurrent	✓	✓
	Phase failure	✓	✓
	Ground fault	✓	✓

	Phase unbalance	✓	✓
	Reverse phase	-	✓
Storing the last fault cause		✓	✓

### Selection

Mount/Connection	Ground fault current	Optional function	Setting range	Catalog No.
• Separate mount	Zero phase current (0.1~2.5A)	None	0.5 - 60A	GMP60-3TZ
		Reverse phase	0.5 - 60A	GMP60-3TZR
• Cable Connection through CT holes	Residual current (0.5~6A)	*ZCT required	0.5 - 60A	GMP60-3TN
		Reverse phase	0.5 - 60A	GMP60-3TNR

Note) Use ZCT for EMPR, 100mA/40 ~ 55mV

### Technical information

Mounting	On 35mm rail or panel with screws
Setting tolerance	Current $\pm$ 5%
	Time $\pm$ 5% (or $\pm$ 0.5sec)
Frequency	50/60Hz
Auxiliary contact rating	5A/250VAC at resistive load
Insulation resistance	Min 100M $\Omega$ at 500V DC
Surge insurance	5kV (IEC 61000-4-5)
Fast transient burst	2kV (IEC 61000-4-4)
Ambient temperature	-25 to 70°C for operation
	-30 to 80°C for storage
Humidity	30 to 90% RH
Operating indication	Red/Green 2-color LED, Red LED
Standard	IEC 61000, KEMC 1120

# Electronic motor protection relays

## Inverse time characteristics

### GMP80 Type

#### Description

- Wide and adjustable current range
- Adjustable trip time (trip class 5-30)
- Separately mountable on 35mm DIN rail or with screws
- 1NO+1NC trip contacts
- Manual reset as standard (Automatic reset optional: GMP80-2SA)

#### Front face configuration

# Characteristics DMP Series

## DMP-S/SZ/SI, T/TZ/TI Type

- Unit type or extension type is available
  - Extension type: Remotely mounts the display unit on the panel surface
- Ampere meter function: current and setting value by press the display button
- Select the inverse time or definite time
- Display the causes of the fault and the values

Extension type (with cable)

### Protect function

Over current	Depend on setting time	Selectable the inverse/definite
Phase failure	Within 3seconds	Over 70% of the rate of unbalance
Phase unbalance	Within 5seconds	Over 50% of the rate of unbalance
Reverse phase	Within 0.1seconds	Function enable
Stall	Within 5seconds	Over 180% of the setting current
Lock	Within 0.5seconds	Setting 200~900% of rated current
Under current	Within 3seconds	Setting 30~70% of rated current
Ground fault <sup>Note1)</sup>	Selectable 0.05~1.0seconds	Grounded current setting by dip s/w (100~2500mA)
Short circuit	Within 50ms	300~1800% of rated current

Note) Lock protection is operated after setting D-time in case of definite time type

### Function selection

FUNC	Sel	Description
1. CHA	Inv/DEF	Operating characteristics setting (Inverse/definite time type)
2. dEF <sup>Note1)</sup>	0~30 (S)	Setting the operating time (In definite type)
3. r.P	oFF/on	Reverse phase enable
4. Und	oFF/30~70 (%)	Under current enable and setting
5. Alt	oFF/60~110 (%)	Alerting enable and setting (DMP-S, T type)
5. g-F	oFF/0.05~1.0 (S)	Ground fault enable and setting (DMP-Z type)
5. Sho	oFF/300~1800 (%)	Short current enabling and setting (DMP-I type)
6. Stl	oFF/on	Stall enable
7. Loc	oFF/200~900 (%)	Lock enable and setting
8. Ct	1~120	CT ratio setting
9. P.F	on/oFF	Phase fault enable
A. gFd <sup>Note2)</sup>	oFF/on	Setting delay of ground fault (DMP-Z type)
b. StA	0~120	Operating time setting by month (DMP-a type)
c. StH	10~730	Operating time setting by hour (DMP-a type)
d. tAH	A000,000.0	Displaying total operating time (month, hour) (DMP-a type)
E. rAH	A000,000.0	Displaying operating time (month, hour) (DMP-a type)
Sto	Sto	Store

Note) 1. [dEF] is only displayed when [DEF] is selected in a [CHA] mode  
 2. Functions for A to E are available for only DMP-a type.

### Ratings

Model	DMP□-S/Sa, T/Ta, SI	DMP□-SZ/SZa/SI, TZ/TZa/TI

# Electronic motor protection relays

## Characteristics IMP Series

### IMP-C Type

- MODBUS RS-485 Communication or 4~20mA analogue output
- 3 phase ampere meter function: Check the 3 phase current and setting value by press the display button
- Select the Thermal inverse/inverse time or definite time
- Easy to operate: Set the most function by the operation button and knob
- Display the causes of the fault and the values
- Adjustable wide current range (0.5~100A)

Extension type (with cable)

### Protect function

Over current	Depend on setting time	Selectable the inverse/definite
Phase failure	Within 1.5seconds	Over 70% of the rate of unbalance
Phase unbalance	Within 3seconds	10~70% of the rate of unbalance
Reverse phase	Within 0.1seconds	Function enable
Stall	Within 3seconds	setting 150~500% of rated current
Lock <sup>Note1)</sup>	Within 0.5seconds	Setting 200~800% of rated current
Under current	Within 3seconds	Setting 30~90% of rated current
Ground fault <sup>Note2)</sup>	Selectable 0.05, 0.1~1.0seconds	gF: 0.03/0.05/0.1~3A gn: 20~500% of the FLC min

Note) 1. Lock protection is operated after setting D-time in case of definite time selected.  
2. [12. gF] Zero sequence CT, [13. gn] Residual circuit sensing.

### Setting Menu (A Group)

Menu	Setting Value	Item	Default Value
1.CHA	dEF/Th/n-th	Operation Characteristics (Definite Time / Heat Accumulation Inverse Time / Inverse Time)	n-th
2.O-t	1~60s	Operation Time (sec)	60
3.d-t	1~200s	Operation Delay (sec)	In chase of dEF
4.r-c	0.5~10A/5~100A	Rated Current	Max.
5.Ctr	0.25, 0.5, 1~200	CT Ratio (4 times, twice, once)	1
6.Loc	OFF, 200~800%	Lock Protection (sec)	OFF
7.StL	OFF, 150~500%	Stall Protection (sec)	OFF
8.P-F	OFF/On	Open Phase	OFF
9.P-U	OFF, 10~70%	Unbalance Protection (%)	OFF
10.r-P	OFF/On	Reverse Phase	OFF
11.UC	OFF, 30~90%	Low Current Protection (%)	OFF
12.gF	OFF, 0.03, 0.05/0.1~3A	Ground Fault Operation Current (Zero-Phase-Sequence Current) (A)	OFF
13.gn	OFF, 20~500% (FLCmin)	Ground Fault Operation Current (Post-Arc Current) (FLCmin)	OFF
14.gt	0.05, 0.1~1.0s	Ground Fault Operation Time (Current)	-
15.gd	On/OFF	Ground Fault Delay During Start	ON
16.IC	OFF, 500~1000%	Instantaneous Protection (%)	OFF
17.AL	I-tp, I-AL, ALo, U-C, OrH	07-08 setting	I-tp
18.Ar	On,60~110% On,60 0%	Alert setting	Only "ALo"
19.cS	1a1b, 2a, 2b	Contact setting	1a1b

### Setting Menu (B Group)

Menu	Setting Value	Item	Default Value
1.E-r	On/OFF	Electric Recovery	On
2.A-r	OFF, 1~20 min	Automatic Recovery (Minute)	OFF
3.r-t	Hour/Minute	Operation Time	Time Check
4.Srt	OFF, 1~8760Hour	Operation Time Setup (Hour)	-
5.s-d	2009/01.01/00:00	YY/MM/DD/HH:MM	-
6.Trt	Day/hour:minute	Total Operation Time	Time Check
A.t-d	0.5~10/5~100A	20mA Output Setup	A420
A.Adr	1~247	Communication Address	M485 Model
b.bps	96/192/384	Communication Speed	
c.S-P	On/OFF	SWAP	

Note) 1. When the power is supplied first or is resupplied after a power failure, must set up the date (5.S-d).  
2. Automatic recovery is only possible in case of an excess current trip.

Note) 1. When the rated current SW is 100A, the CT ratio is not displayed.  
2. Some menus are not displayed if relevant functions are not available.

### Ratings

Model	IMP-C-NO, M485, A420	
Type	Wiring method	Tunnel

Mounting		35mm Din-rail/Panel
Communication		A420: Analog, M485: Modbus
Certification		CE

# Setting method

## GMP Series Inverse time

### 1. Check the rated voltage and apply the control power to A1 and A2 terminal

### 2. Check the TEST/RESET button

- 1) When you press the 'Test/Reset' button, the O.L LED is turned on and the EMPR is tripped
- 2) When you press the 'Test/Reset' button under the EMPR is tripped, the O.L LED is turned off and the EMPR is reset
- 3) Auto reset function: When it is tripped by the over current, it is reset after 1 Min.(Optional)

### 3. Set the operating time

The operating time is set on the base of 600% of the rated current in the characteristic curve

- 1) Set the operating time by considering the operating time and start current according to the types of the load
- 2) If the time knob is set to 10sec, the EMPR is tripped when the start current (600% of the rated current) is applied for 10sec

Caution) The EMPR with inverse time characteristics can be tripped to protect the motor when the motor is started a few times continuously  
When a motor is frequently changing the rotating direction (forward and reverse), set the operating time longer For the crane and hoist use, select the EMPR with definite time characteristics

### 4. Set the operating current

Set the current by considering the rated current of a motor to protect from the over current

- 1) Check the rated current of a motor is within the current setting range of an EMPR
- 2) Set the 'RC' (Rated current) knob to the maximum value and then start a motor
- 3) Under normal motor operation, rotate the 'RC' knob to the counterclockwise until the 'O.L' LED flickers The current at this point in the 100% current rating under real load
- 4) At this point, rotate the 'RC' knob to the clockwise until the 'O.L' LED turned off.  
Ex) When the 'O.L' LED flickering at 20A, the setting current will be 22A(=20x1.1)

Note) The brackets for connection is offered standard

### 5. Check status of operation by LED

- 1) In case of overcurrent  
If there will be an overcurrent during motor operation, the red color of LED will flicker at 0.4 second intervals. After tripping because of overcurrent, the red color of LED will light up.
- 2) In case of phase failure  
If there will be a phase failure in three phase load, it will be tripped within 3 seconds.  
Note) 2CT EMPR can protect motor from R or T phase failure.
- 3) In case of phase unbalance  
If phase unbalance rate is over 50%, FAULT LED will flicker 0.4 second intervals.
- 4) In case of Reverse phase  
Red & green color LED will flicker alternately.

	Condition	LED Status	LED Diagram	Remark	
Operating status	Normal	LED OFF			
	Over current	0.4 Second intervals			
	Phase unbalance (30~50%)	0.4 Second intervals		GMP 80-3S/3SR model, only red color LED will flicker.	
Tripped status	Over current	O.L LED light up			
	Phase failure (3CT)	R	1 time for 3 seconds		GMP 80-3S/3SR model, O.L LED will light up and also FAULT LED will flicker.
		S	2 time for 3 seconds		
		T	2 time for 3 seconds		
	Phase failure (2CT)	Red LED light up for 0.9 sec LED goes off for 0.1 sec			
Reverse phase (3CT)	Red & Green color LED flicker alternately		GMP 80-3S/3SR model, Red/Green LED will flicker.		

Note) There are two red color LEDs for O.L (Overload) & Fault in the model of GMP80-3S/SR

# Electronic motor protection relays

## Setting method

### GMP Series Definite time

#### Tunnel type mounting

##### 1. Check the Test/Reset button operation

- 1) Check if the wiring is correct (Refer to the wiring diagram)
- 2) Set the 'D-Time' and 'O-Time' knob to the min. ratings
- 3) When the 'Test' button is pressed under tripped condition, the 'O.L.' LED is turned off

Note) In operation, even though you press the 'Test/Reset' button, the EMPR do not trip

##### 2. Set the operating time

###### ● D-time (Delay time): 0~30 sec

The motor starting current, which flows when the motor is starting, is generally 600% of the rated current. It is the time during which the EMPR do not operated by over-current during the starting time

- 1) Set the delay time by use of the 'D-time' knob
- 2) In case you do not know the delay time, start the motor by setting the 'D-time' knob to the max. position and after checking the time during which the starting current become stable, set the D-time (In general , the setting time is 3~5 seconds)

###### ● The operating time is the time during which the EMPR tripped by the over-current. The EMPR is tripped after the selected operation time

- 1) Set the operation time by the 'O-time' knob
- 2) If you set the 'O-time' to the min value, the EMPR is tripped at once

Note) Generally set it to 4~6 seconds

Definite time characteristics curve

##### 3. Set the operating current

- 1) Start the motor by setting the 'RC' knob to the maximum position
- 2) Under operating condition, rotate the 'RC' knob to the counterclockwise until the 'O.L.' LED turned on & off. The current at this point is the value (100%) under real load condition
- 3) Rotate the 'RC' knob to the clock-wise until the 'O.L.' LED turned off.  
Ex) When the 'O.L.' LED flickering at 20A, the setting current will be 22A(=20x1.1)

(ex: When the 'O.L.' LED settings at 21A, the setting current will be 23A (=21\*1.1))

##### 4. Check the LED condition when operation

- 1) Over-current
  - The EMPR is not tripped during the D-time under over-current but the O.L LED turned on and off to indicate that the over-current flows
  - If the EMPR is tripped after D-time the O.L LED turned on

Condition	Red O.L LED	Note
Operation normal	Off 	
Overcurrent	Flicker 	
Trip over-current	On 	The EMPR is tripped

# Setting method

## GMP60-TD(a) Type

### ● Function & Setting menu

- 1) Automatic reset setting will work in the event of overcurrent trip
- 2) Func. A and b are to check the elapse time, not for setting
- 3) Undercurrent protection function will work at the current flow more than 0.4A
- 4) In case of changing the rating DIP S/W FUNC #1 should be changed accordingly
- 5) Function setting is allowable at TEST mode
  - Turn off the power before changing a current type switch, and then be sure to adjust the current in the menu

### ● Setting Menu

FUNC	SEL	Description	Remarks
1Ct4	6R/60R	Current type selection	Set the same with rated current S/W
20-t	0.5/1~30(SEC)	Trip time setting	-
3d-t	1~60/1(SEC)	Time delay setting	-
4r-c	0.5~6.0/5~60	Rated current setting	-
5Ct-r	0.25/0.5/1~120	Current ratio setting	-
6P-F	oFF/on	Phase loss enable	-
7U-C	oFF/30~70(%)	Undercurrent setting	For TDa model only
8R-r	oFF/1~20(MIN)	Automatic reset setting	For TDa model only
9S-t	oFF/10~8760	Operation hour setting	For TDa model only
AR-t	-	Total running hour check	For TDa model only
br-t	-	Running hour check	For TDa model only
Sto	-	Store	-

- Note) 1. If operation hour set at **9S-t** is elapsed **URH** is displayed and the relay operates normally. (There is no additional relay output)  
 2. How to check **AR-t** and **br-t**

Display	How to check	
<b>AR-t</b>	Press SEL	Day displayed   Press SEL   Hour, Min displayed
	Press SEL	Operation hour displayed   Press SEL   Day displayed
<b>br-t</b>	Press SEL	Min displayed

3. When power is OFF the data in unit of minute is deleted at **AR-t**
4. Operation hour at **AR-t** is the total running hour before the motor is oFF and displayed in Day, Hour and Min. When motor is OFF the data is deleted.

### ● Fault status configuration

Protection	FND	Description	Remarks
Over current	O - L	More than set current : Within the set time	
Undercurrent	U - C	Lower than the undercurrent set ratio : Within 3S	GMP60TDa
Phase Loss	PF - r	Over 70% of the rate of unbalance : Within 3S	R Phase Loss
	PF - t	Over 70% of the rate of unbalance : Within 3S	T Phase Loss
LOCK	Loc	More than lock set current ratio : Within 1S	
Approaching Running Time	OrH	When Running time approaches at setting time	GMP60TDa

Note) When the 'FUNC' Key and 'SEL' Key are pushed simultaneously, a last trip cause appears on the display window.

# Electronic motor protection relays

## Setting method

### GMP60-3TZ(R) / 3TN(R) Type

- **Trip curve: definite time characteristics**
- **Protective function: overcurrent, locked rotor, phase loss, phase unbalance, ground fault (and phase reverse)**
  - 1) Overcurrent: trip within 3 sec. after D-time at 105% or more
  - 2) Locked rotor: trip within 1 sec. after D-time at 300% or more
  - 3) Phase loss: trip within 3 sec. (phases unbalance rate over 70%)
  - 4) Phase unbalance: trip within 5 sec. (phases unbalance rate over 50%)
  - 5) Ground fault: trip within 0.5 sec. after D-time at over 110% or under 90% of set value
  - 6) phase reverse: trip within 1 sec. when any two phases out of three
- **Overcurrent trip time**
  - 1) Time delay(D-time) setting: between 0.2-60 sec.
  - 2) Trip time(O-time) setting: fixed at 3 sec.
- **Last fault cause data stored**
  - to display it press TEST/RESET button 2 times within 0.5 sec.
  - PWR LED flicking in case of no fault

- Note) 1. Make power off before changing the rated current with SW ①  
 2. The setting range of RC (A) KNOB ⑥ is recognized as 0.5 ~ 6A or 5 ~ 60A according to the setting value of SW ①. The value of the scale for RC (A) KNOB ⑥ is 0.5, 1, 2, 3, 4, 5, 6 or 5, 10, 20, 30, 40, 50, 60(A) from the left.  
 3. Last fault cause function indicates the LED status for the last TRIP.

Note) In case of load less than minimum rating of EMPR make the number of penetrating through CT more than 2 times. If not, error may happen to phase loss.

#### ● Status of LED configuration

NO	Function	Setting	Description	Remark
①	6A/60A	Slide switch	Maximum rated current (6A/60A) setting	-
②	PWR.	Red LED	Lights up when power is ON	Blinking in the failure mode
③	FAULT	Red / Green LED	Overcurrent / unbalance in progress: Overcurrent TRIP: Phase loss (unbalance) TRIP <ul style="list-style-type: none"> <li>· R-phase: </li> <li>· S-phase: </li> <li>· T-phase: </li> </ul> Reverse phase:	Red LED Green LED
④	GF	Red LED	Lights up after blinking in the event of ground fault	-
⑤	D-TIME (S)	KNOB	Delay time (0.2 to 60 sec.)	-
⑥	RC (A)	KNOB	Rated current setting: 0.5~6A/5~60A	-
⑦	GR (A)	KNOB	Sensitivity current setting (0.1~2.5A)	Zero phase current detection type
			Sensitivity current setting (0.5~6A)	Residual current detection type
⑧	TEST/RESET	BUTTON	TRIP / RESET alternately perform <ol style="list-style-type: none"> <li>1. Check relay contacts - displays fault cause</li> <li>2. RESET</li> </ol>	Pressing 2 times within 0.5 sec. the final failure cause is displayed

# Setting method

## DMP Series

### 1. Check the operation of the Test/Reset button

- 1) Check the wiring method
- 2) Press the Test/Reset button and then test is displayed on the LED and the DMPR is tripped
- 3) Press the Test/Reset button again and then it is reset

Note) The Test/Reset is not available when a motor is rotating.

### 2. Shift the mode by pressing the FUNC key and then select the values by the Sel key

- 1) First shift to the test mode by press the "Test/Reset" button and then set the functions by press the "FUNC" button
- 2) Each time you press the "FUNC" button, the function mode switches from 1.CHA mode to Sto mode.  
When the mode that you want to change is displayed, push the "Sel" button to select the value you want.  
After you select the value, press the "FUNC" button to finish the settings and it displays the next mode
- 3) If no button is pressed in the selection mode, it remains in that mode
- 4) If you select the inverse time characteristics it skips the mode 2 (Definite O-time) and go to the mode 3 (Reverse phase)
- 5) Alt is the alert setting mode. It displays the load rate of the current setting value by the bar LED (60~110%)
  - If the current is higher than the setting value, the bar LED is switched on and off and the AL relay (07-08) make close and open in 1sec interval unit the EMPR is tripped (Pre-alarm function)
  - If the 5. Alt mode is set to off, the AL relay make close after the EMPR is tripped (Normal open contact)
- 6) To finish the settings you have to press the "Sel" button in the Sto mode

Alarm signal (Alert function)

### Setting Menu

FUNC	Sel	Functions	Note
1.CHA	1 nu/dEF	Inverse or definite time characteristics	Default is inverse time characteristics
2.dEF	0-30	Set the O-time (Definite time only)	For D-time setting, use the time knob
3.rP	oFF/on	Reverse phases protection	Default is "Off"
4.Wnd	oFF/30-70 (%)	Under current protection	Default is "Off" <sup>Note1)</sup>
5.ALt	oFF/60-110 (%)	Alarm function (With pre-alarm function)	Default is "Off" (DMP-S, T type)
59-F	oFF/0.05-1(SEC)	Ground fault and Setting the operating time	Default is "Off" (DMP-Z type)
55Ho	oFF/300-1800 (%)	Short current Protection enabling and setting	Default is "Off" (DMP-I type)
65tL	oFF/on	Stall function	Default is "Off"
7Loc	oFF/200-900 (%)	Lock function	Default is "Off"
8.Ct	1-120	CT ratio	Default is 1:1 <sup>Note2)</sup> (DMP06 Modle)
9P-F	on/oFF	Phase failure	Default is "On" to store
89Fd	oFF/on	Setting delay of Ground Fault	Available for SZa/TZa
65tR	0-120	Operating time setting (Month)	DMP□-Sa/Ta/SZa/TZa model
65tH	10-730	Operating time setting (Hour)	
dEtR	R000,000.0	Displaying total operating time (Month, Hour)	
EtR	R000,000.0	Displaying operating time (Month, Hour)	
Sto	Sto	Store	Push the SEL button to store

- Note) 1. Set the under current value from above 350mA  
 2. Do not change the CT ratio in 36, 60 type  
 3. When using DMP to loads over 60A, you should use DMP-06 and an external CT that secondary output is 5A  
 4. When using external CT, maximum primary current is 600A

# Electronic motor protection relays

## Setting method

### DMP Series

### 3. Adjust the operating time by the time knob

#### ● Inverse time characteristics

- 1) Select the inverse time in the 1. CHA mode, the default operating time is 600% of the setting current
- 2) The setting range of the operating time is 0~60sec. Set the time by considering the motor start time
- 3) When it is over the setting time, the EMPR operate in accord with the hot characteristics curve

#### ● Definite time characteristics

- 1) Select the definite in the 1. CHA mode, it is operated by the definite time characteristics
- 2) D-time means the time that delays the operating time when the motor is starting
- 3) The setting range of the operating time is 0~60sec. Set the time by considering the motor start time
- 4) Set the O-time at the setting mode 2. dEF and the range is 0~30sec

### 4. Adjust the operating current by the current knob

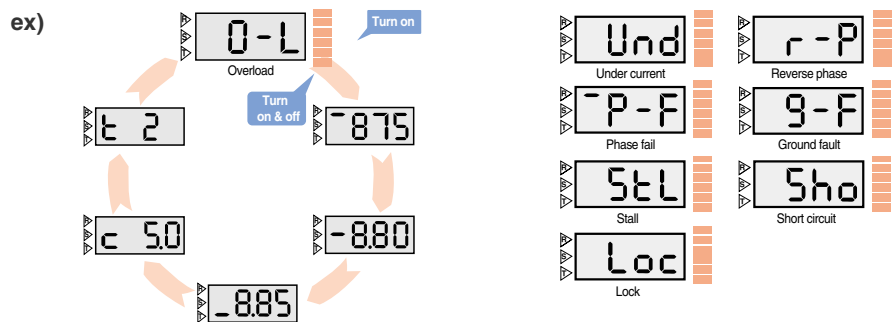

- 1) Set the operating current based on the rated current that is described in the name plate. Generally set the 110~115% of the real load current in the normal load condition
- 2) There are 3 types according to the current range (6 / 36 / 60). When you use the external CT you can see the real current by setting the CT ratio
- 3) You can easily set the current value by refer to the load rate which is displayed on the bar-graph (Approx. 90% load rate)

### 5. Check the setting state by the display key

- 1) In normal condition it display the maximum current among the three phase current
- 2) Each time you press the "Display" button you can see the current and values
- 3) If no button is pressed for 3~4 seconds. It returned to the normal condition

### 6. Check the causes of the fault by look at the display unit

The causes of the fault is switched on and off for 0.5sec interval. If you press the "Display" button at this time, you can see the values and the causes of the fault

### Zero current sensitivity setting

Sensitivity (mA)	DIP S/W			
	1	2	3	4
100	○	○	○	○
200	1	○	○	○
500	○	1	○	○
1000	○	○	1	○
1500	○	○	○	1
2000	○	○	1	1
2500	1	1	1	1

Note) 1. Please use ZCT for LS EMPR.

# Operation and Setting

## IMP Series

### 1. Test/Reset

- 1) Check wires.
- 2) Press the Test/Reset key once. Then “TEST” is displayed and the EMPR is tripped.
- 3) Press again the Test/Reset key to reset the EMPR.

*Note) While the motor is running, the Test/Reset key does not work.*

### 2. Setting

- 1) Press the Test/Reset key once. Then “TEST” is displayed and the EMPR is tripped.
- 2) Press the Enter key. Then “P-99” is displayed. Use the Up/Down keys to change the password.
- 3) Press the Enter key to enter A-gr setup mode.  
Use the Up/Down keys to select a group and Press the Enter key to enter the selected group.  
Press the Test/Reset key to move back to the previous mode.
- 4) In the A-Grp mode, Press the Enter key. Then “1.CHA” is displayed.  
Use the Up/Down keys to select an item and Press the Enter key to enter the selected item.  
Press the Test/Reset key to move back to the previous mode.
- 5) Use the Up/Down keys to set up the value and Press the Enter key to save it.

*Note) When the power is supplied first or is resupplied after a power failure, must set up the date in b-gr, 5.S-d.  
Set up the rated current S/W while the power is off.*

### 3. Quick Setup

- 1) Press the “Up and Enter” keys at the same time. “UPLD” is displayed and settings are uploaded to the display.
- 2) Insert the display to the body without settings, and then press the Test key to enter the test mode.
- 3) Press the “Down and Enter” keys at the same time. “TEST” is displayed and downloading is completed.
- 4) Press the Test key to return to the normal mode.

*Note) Communication settings cannot be uploaded or downloaded.*

### 4. Setting Checkup

- 1) Press the Enter key.
- 2) Use the Up/Down keys to select a group and Press the Enter key to enter the selected group.  
Press the Test/Reset key to move back to the previous mode.
- 3) Use the Up/Down keys to select an item and Press the Enter key to enter the selected item.
- 4) Press the Enter key again to check settings.

### 5. Failure Event Checkup

- 1) Press the Up and Down keys at the same time to display “1.O-C” (recent failure events).  
*Note) When no failure events are stored, “1.non3” is displayed.*
- 2) Use the Up/Down keys to select an event and press the Enter key to go to the selected event.
- 3) The R-phased failure current is displayed. Every time the Down key is pressed, S-phased failure current, T-phased failure current, overload rate and date are displayed one after the other.
- 4) Press the Test/Reset key to move back to the previous mode.
- 5) Press the Up and Down keys at the same time to get out of the failure event checkup mode.

### 6. Forced Thermal Reset

When the system is tripped while it is in the thermal inverse time mode, if you want to turn the EMPR into the cold mode by resetting the motor’s heat amount, Press the Enter and Test/Rest keys at the same time.

*\* When a trip occurs due to the thermal excess current, if the motor is started right after it is reset, as the motor is hot, it is highly likely that the motor is tripped again.*

# Electronic motor protection relays

## Operation and Setting

### IMP Series

#### Setting Menu (A Group)

Group	Menu	Setting Value	Description	Default Value
A	1CHR	dEF/th/n-th	Operation Characteristics (Definite/Thermal Inverse/Inverse)	n-th (Inverse)
	20-t	1~60s	Operation Time (sec)	60
	3d-t	1~200s	Delay Time (sec)	200
	4r-l	0.5~10A/5~100A	Rated Current (10/100A)	10/100A
	5Ctr	0.25, 0.5, 1~200	CT Ratio (4 times, twice, once)	1 <small>Note1</small>
	6Loc	OFF, 200~800%	Lock Protection (sec)	OFF
	7StL	OFF, 150~500%	Stall Protection (sec)	OFF
	8P-F	OFF/On	Open Phase	OFF
	9P-U	OFF, 10~70%	Unbalance Protection (%)	OFF
	10rP	OFF/On	Reverse Phase	OFF
	11UC	OFF, 30~90%	Under Current Protection (%)	OFF
	12gF	OFF, 0.03, 0.05/0.1~3A	Ground Fault Operation Current (Zero sequence CT)	OFF
	13gn	OFF, 20~500% (FLCmin)	Ground Fault Operation Current (Residual circuit)	OFF
	14gt	0.05, 0.1~1.0s	Ground Fault Operation Time	-
	15gd	On/OFF	Ground Fault Delay During Start	ON
	16IC	OFF, 500~1000%	Instantaneous Protection (%)	OFF
	17Io	I-tp, I-AL, U-C, OrH, ALo	AL(07-08) contact setting	I-tp
		I-tp	Instantaneous-current trip and warning	-
		I-AL	Instantaneous-Current warning only	-
		U-C	Under-Current warning only	-
	OrH	Run Time Elapsed warning only	-	
	ALo	Activating 18.Ar. Menu	-	
	18Ar	On, 60~110%/10(%)	In case of ALo setting is done	not use
		On	On-load status (I > 0A) signal	-
		60~110%	Over-current warning signal (over the setting value)	-
	19cS	1a1b, 2a, 2b	Contact (95-96, 97-98) Setting	1a1b

Note) 1. When the rated current S/W is 100A, the CT ratio is not displayed.  
2. Some menus are not displayed if relevant functions are not available.

#### \* Contact operation exemplification (Menu 19. cS)

19.cS	Setting Value	Motor state	Contact operation		Default Value
			95-96	97-98	
1a1b		Normal running	NC	NO	1a1b
		Ground/Leakage Fault	NO	NC	
		Fault operation (except Ground fault)	NO	NC	
2a		Normal running	NO	NO	
		Ground/Leakage Fault	NO	NC	
		Fault operation (except Ground fault)	NC	NO	
2b		Normal running	NC	NC	
		Ground/Leakage Fault	NC	NO	
		Fault operation (except Ground fault)	NO	NC	

# Operation and Setting

## IMP Series

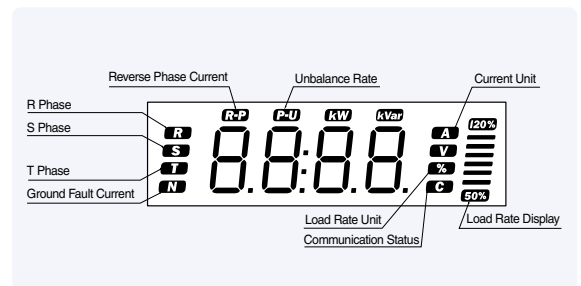

### Setting Menu (B Group)

Group	Menu	Setting Value	Description	Default Value
B	1E-r	On/OFF	Electric Reset	On
	2R-r	OFF, 1~20 min	Automatic Reset	OFF
	3r-t	Hour/Minute	Run Time	Time Check
	4S-r	OFF, 1~8760Hour	Run Time Setup (Hour)	-
	5S-d	2009/01.01/00:00	YY/MM/DD/ HH:MM (View/Setup)	-
	6t-r	Day/hour:minute	Total Run Time	Time Check
	Rt-d	0.5~10/5~100A	Analog output	A420 Model
	Rtd-r	1~247	Communication Address	M485 Model
	bbPS	96/192/384	Communication Speed	
	eS-P	On/OFF	SWAP	

Note) 1. When the power is supplied first or is resupplied after a power failure, must set up the date (5.S-d).  
 2. Automatic reset is only possible in case of an excess current trip.

### Operation Display

Display	Description	Remark
0-C	Over Current Trip	Operate within predefined time.
U-C	Under Current Trip	Operate within 3 seconds.
P-F	Open Phase Trip	Operate within 1.5 seconds when the unbalance rate is over 70%.
P-U	Unbalance Trip	Operate within 3 seconds.
L o c	Lock Trip	Operate within 0.5 seconds.
StL	Stall Trip	Operate within 3 seconds.
r-P	Reverse Phase Trip	Operate within 0.1 second.
g-F	Ground Fault Trip	Operate within predefined time.
Sho	Instantaneous Trip	Operate within 0.05 seconds.
0-rH	Elapsed Time (No Trip)	The operation time is reset when the Reset key is pressed.
EErr	Communication Fault between Body and Display (Press the ENTER/RESET key to return to the normal mode)	

Note) kW, kVar, and V indicate the specification of the voltage models (under development).

### IMP Specifications for Low Voltage 3-Phase Induction Motors (Reference)

Full Load Current for the Motor	IMP Settings			External CT	Motor Output (Less than kW)		
	Current Selection S/W	Wire Tunnel	CT ratio		220V	380V	440V
0.7A or less	0.5~10A	4 times	0.25	-	0.1	0.18	0.2
0.7~1.6A		Twice	0.5	-	0.25	0.55	0.6
1.6~8A		Once	1	-	1.5	3	3.7
7~100A	5~100A	Once	1	-	25	45	55
90~120A		Once	30	SCT-150	30	55	55
120A~160A		Once	40	SCT-200	45	75	90
160~240A		Once	60	SCT-300	55	110	132
240~320A		Once	80	SCT-400	90	160	160
320~400A		Once	100	500 : 5	110	200	200
400~480A		Once	120	600 : 5	132	250	250
480~640A		Once	160	800 : 5	160	320	320

Note) 1. This table is written based on the full load current.  
 2. The CT is selected as a reference for the EMPR's current setting range.

### Analog (DC 4~20mA) Output / Communication

- The biggest current out of measured 3-phase currents is converted into DC 4mA~20mA and the current measured remotely by digital meter can be displayed.
- When there is no current, 4mA is sent. If the current goes beyond the predefined value, 20mA is sent.
  - Output Current =  $\frac{16mA}{\text{Setting}} \times \text{Load Current} + 4mA$  (Settings are changed in A.t-d of b-gr)
- When the system is the 0.5A~10A setting mode, measurement starts from 0.3A. When the system is the 5A~100A setting mode, measurement starts from 3A. Thus, when the current is under 0.3A (3A), 0A is measured and output is 4mA. (To measure the load current correctly, an appropriate CT should be used).

Note) The allowable burden is less than 500Ω.  
 Considering the receiver resistance (usually 250Ω) and track resistance, the shielding cable should be used.

## Wiring method

### IMP Series

Note) 1. When the zero-phase-sequence current transformer is used to detect ground faults, connect the ZCT.  
 2. When the single-phase motor is used, all phases are connected except the S phase, and open-phase, unbalance and ground fault should be set OFF.

### Terminal layout

### Communication specification

- Operation mode: Differential
- Distance: Max. 1.2km
- General RS-485 shielded twist 2-pair cable
- Baud rate: 9600/19200/38400bps
- Transmission method: half-Duplex
- Max. In/Output voltage: -7V~+12V

### Terminal Configuration

Engrave	Description	Remark
A1(+), A2(-)	Input terminal for operation power	AC/DC 85~245V, AC/DC 24~36V
95-96	When the power is ON (NC contact output)	In case of an instantaneous trip, if 17.lo is ALT, it is NC, and if 17.lo is Trip, it is NO.
97-98	When the power is ON (NC contact output)	In case of an instantaneous trip, regardless of 17 .lo setup, it is NC.
07-08	Converted to the NC mode only when an instantaneous trip occurs.	
Z1, Z2	Output terminal for the zero-phase sequence current transformer	Specific ZCT (for the EMPR)
TRX(+)	RS485 terminal (TRX+) Or 4~20mA (+) output	M485, A420 Type
TRX(-)	RS485 terminal (TRX-) Or 4~20mA (-) output	
10A/100A	Max. rated current change S/W	10A : 0.5~10A, 100A : 5~100A
VR/VS/VT	3-phase voltage input terminal	N/A
05-06	Output terminal for voltage protection	

Note) 1. The 3-phase voltage input terminal and 05-06 output terminal should be connected only for voltage protection models, which will be released in the future.  
 2. For RS485 connection, the terminal resistance should be 120Ω .  
 3. For 4~20mA current, the maximum burden should be less than 500Ω .

Type	Diameter (A)	Ratio	Weight (kg)	Model
ZCT, D30	30	100mA/40~55mV 200mA/100mV	0.5	LZT-030
ZCT, D50	50		0.7	LZT-050
ZCT, D65	65		0.9	LZT-065
ZCT, D80	80		1.5	LZT-080

##### Dimension

ZCT 30

Unit (mm)

Model	A	B	C	D	E	F	G	H	I	Ø
LZT-030	30	25	108	100	114	7	32	32	110	6

ZCT 50, 65, 80

Unit (mm)

Model	A	B	C	D	E	F	G	H	I	Ø
LZT-050	50	25	131	100	122	7	32	36	114	6
LZT-065	65	26	143	114	133	7	39	37	126	6
LZT-080	80	34	174	160	180	7	40	40	151	6

#### Other Options

##### Cable

Applicable Type	DMP, IMP Series
Spec.	1m, 1.5m, 2m, 3m, 4m

\* Panel mount: Extension cable

##### Terminal Block

Applicable Type	DMP Series, GMP60-3T, 3TZ, 3TN
Spec.	60A below
